

Using prepza responsibly: instructions for companies

Version: 2026-10-08

Operator: Arcolabs OÜ (registry code 17587452), Sepapaja tn 6, 15551 Tallinn, Harju maakond, Estonia;
hello@prepza.ai

For owners and admins of a company on prepza. These are prepza's instructions for use. They don't replace advice on the employment and data protection law that applies to you.

1. What a prepza grade is

- The **percentage of questions answered correctly**, over every question the candidate was shown. A question with nothing picked when its timer ran out counts as wrong. Candidates can change their pick until they move on; only the final one is kept.
- Each answer is marked right or wrong against the question's **answer key**. No AI marks answers, and nothing else (speed, page leaves, copy attempts) changes the grade. If a question's key is found to be wrong and corrected, the answers already given to it are marked again and the grades recalculated.
- **Green or red** only compares the grade with the passing grade you set. **The ranking** sorts by grade, best first.

2. What a grade is not

- Not a measure of overall ability, experience, potential, personality or fit.
- Not a qualification or certificate.
- Not exactly comparable between candidates: each one gets a different random set of questions from the same bank, so small differences (a few points) can come from the draw.
- Not free of error: questions are written by AI. A sample of answer keys in each topic is checked before release, and questions are improved as answers and reports come in, but a question can still be wrong or unclear, especially in a new interview before about 30 people have answered it.
- Also a test of **reading speed and language** when the interview is timed and not in the candidate's first language.

3. Human review: your duty

People at your company make the hiring decision. prepza never tells a candidate they were rejected.

- **Before rejecting anyone on a prepza result, a person must open their scorecard** and look at the answers, not just the grade, colour or rank.
- Use the grade **alongside** other information (CV, work samples, interviews), not as the only gate, unless you have checked with your own legal adviser that this is lawful and fair for the role.
- If a question looks wrong, report it with **Wrong answer**: prepza checks its answer key again, usually within a day. Take that into account for candidates who already answered it.

- **Candidates can ask you for a human review** of their result (prepza tells them so on the invite page, and reminds you on the results page and in PDF reports). Name who handles these requests, reply within a reasonable time, and be ready to explain what was tested and how the result was used.
- In the EU, a decision based solely on automated processing that significantly affects a candidate is restricted (GDPR Art. 22). Rejecting automatically everyone below the passing grade may count as one.
- The same applies to results prepza sends to the tools you connect: your applicant tracking system, Slack, or your own systems through the API and web hooks receive the grade and whether it reached the passing grade. **Don't set them up to reject candidates automatically** on those results; the human review above applies there too.

4. Choosing a passing grade

- The default 70% is a starting point, not a recommendation for your role.
- Try the interview yourself first (**Try as a candidate**, free). Ask one or two people who do the job well to try it too: their grades show what "good" looks like.
- Set the passing grade from what the role needs, and write down why. Don't raise it to cut volume.
- Treat grades near the passing grade (for example within 5–10 points) as a band that deserves a closer look, not a hard cut.
- Keep the same passing grade for every candidate of the same interview.

5. Integrity signals

Page leaves, copy attempts and answers under 3 seconds are **hints, not proof**. A notification, an accessibility tool, a slow connection or a fast expert can all trigger them. Never reject on signals alone; follow up in a conversation, and let the candidate explain.

6. Accommodations and extra time

- Tell candidates, before they start, how to ask for an accommodation (the candidate notice templates include this).
- prepza's invite page tells candidates to ask you for more time before they start.
- For a candidate who asks, open the candidate's menu in the candidate list and set **extra time: +25%, +50% or +100%** on every question's timer. It can be set or changed only **before the candidate starts**, so agree it first. prepza stores only the amount, never the reason. Their scorecard is compared with the same passing grade.
- If timed multiple choice doesn't suit the candidate's needs at all (for example some screen-reader or motor impairments), offer an **alternative assessment** outside prepza. Don't ask for medical details beyond what you need.
- You can also raise the time per question for everyone in the interview's settings.

7. Telling candidates

Before you invite, tell candidates that they will take a timed AI-generated knowledge test, what it covers, how the result is used, that page leaves and copies are recorded, how long data is kept, and how to ask for an accommodation, an alternative or a human review. prepza's candidate notice templates (at prepza.ai/documents) are a starting point. prepza's invite page also tells candidates what to expect and links prepza's privacy policy, but the notice about **your** use of the results is yours to give.

prepza's invite and reminder emails let candidates stop your company's emails, or that interview's reminders, with a link at the bottom. Once a candidate stops your company's emails, prepza doesn't email them for your company again: an invite to them shows as undelivered in the candidate list, so reach them another way if you still need to.

8. Retention

- Candidate results, timings and signals are **deleted automatically 12 months after the invite** was last sent.
- Invites never started expire after 30 days.
- A candidate's request to stop your company's emails is kept, as a one-way hash of their email address, until you delete the company, also after you delete the candidate.
- PDFs you download are yours to keep and delete under your own retention policy.
- Job description text is kept 90 days in generation records; the interview stays until you delete it.

9. Answering candidates' data requests

You are the controller of candidates' interview data; prepza is your processor under the data processing agreement at prepza.ai/dpa, which is part of the terms.

- **Access:** open the candidate's **scorecard page** and download their **PDF report**. Together they hold everything prepza keeps about the interview: each question, their answer, right or wrong, time taken, page leaves and copy attempts, and the grade. Send the PDF, with your own explanation of how it was used.
- **Erasure or objection:** on the candidate's page, revoke an unused invite, or use **Delete candidate** for one who started or finished: their answers and results are deleted for good, and credits still held come back (a finished candidate stays charged).
- If a candidate writes to prepza instead, prepza passes the request on to you.
- Candidates can also download what is linked to their own prepza account with **Download my data** in Settings.

10. Where not to use prepza

- As the **only** basis for a rejection without human review.
- For skills a multiple-choice knowledge test can't measure (manual, interpersonal, creative work) or knowledge the job doesn't actually need.
- For promotion, termination, performance monitoring or task allocation of employees.

- For candidates under 16.
- For **New York City** roles, until a summary of an independent bias audit of prepza is published. Local Law 144 may require such an audit within the year before use, and notice to candidates before they are assessed.
- Where your local law requires a works council agreement, a regulator approval or a bias audit you haven't done.

Reporting serious problems

Tell prepza at once at hello@prepza.ai if a result may have harmed a candidate (for example a wrong answer key behind a rejection), you see signs of unfair results for a group of candidates, or anything looks like a security problem. prepza investigates, and reports serious incidents to the authorities when the law requires it.
